

Jacob Brewer

South Bend, Indiana · jacobbrewerrooney@gmail.com · linkedin.com/in/jacobbrewer-dev · jacobbrewer.dev

Full-stack software engineer with 5+ years of experience in Laravel and Next.js, specializing in scalable application architecture, CRM integrations, and third-party API development. Proven ability to work independently, make architectural decisions, and ship in fast-moving startup environments. Recognized multiple times by Awwwards.com for production web work.

WORK EXPERIENCE

Founding Engineer — Easy Tidings

March 2026 – Present

Remote · Contract

- Sole engineer on a Laravel 11 platform; own all architectural decisions and present tradeoffs directly to the founding team — including database schema design, RBAC restructuring, and a Care Coordinator portal built with Laravel Filament
- Configured a Linux staging environment via CLI, establishing a GitHub-based deployment pipeline to a staging subdomain for safe iterative releases
- Audited and remediated critical production security vulnerabilities including hardcoded Stripe credentials, broken middleware, and IDOR exposure across multiple controllers
- Migrated a version-control-free production codebase to GitHub and introduced branching and deployment workflows for a non-technical founding team

Software Engineer — Launch Consulting Group · Airstream / Thor Industries

January 2025 – Present

Remote · Contract

- Built and maintained HubSpot CRM integrations supporting Airstream's full dealer sales cycle — including lead scoring models, contact lifecycle management, and dealer routing architecture across a national network
- Designed and shipped a factory tour registration system integrating HubSpot, Make.com, and Airtable via REST APIs and webhooks, with a custom vanilla JS frontend calendar built within WordPress constraints
- Implemented SAML SSO between a custom Laravel identity provider and Absorb LMS, enabling single sign-on for Airstream's dealer training platform
- Debugged and redesigned a Make.com/Aimbase account sync automation, resolving a race-condition duplicate account bug caused by delayed Airtable ID write-back

Lead Coding Instructor — South Bend Code School

Feb 2025 – Aug 2025

South Bend, IN · Contract

- Taught Python to middle and high school students as lead instructor, covering fundamentals through applied programming projects (10–15 hrs/week)

Software Engineer II — J2 Marketing

2022 – 2024

South Bend, IN

- Introduced Next.js and Sanity CMS as the agency's primary stack, independently architecting and delivering multiple production client sites — a decision that raised the agency's minimum project pricing 100%, from \$8,000 to \$15,000
- Built AWS infrastructure from scratch using CloudFront, S3, and IAM, cutting large-asset load times from 30+ seconds to under 2 seconds for client video delivery
- Earned multiple Awwwards Honors Awards and a CSSDA Community Innovation Award for production Next.js sites, with two additional Awwwards Site of the Day nominations
- Maintained and extended WordPress-based client sites prior to the Next.js migration, managing deployments and custom theme development across a range of industries

EDUCATION & CERTIFICATIONS

B.S. Computer Science — Western Governors University

Expected 2028

Technical Certification, Full Stack Development — University of Pennsylvania

2021 – 2022

TECHNOLOGIES

Languages: PHP, JavaScript, TypeScript, Python
Frameworks: Laravel, Next.js, Vue / Nuxt, React, Tailwind CSS, Node.js
Databases: MySQL, PostgreSQL
Infrastructure: AWS (CloudFront, S3, IAM), Linux, GitHub Actions, CI/CD pipelines
Integrations: HubSpot, Airtable, Make.com, Stripe, Sanity CMS, SAML / SSO
Tools: Git, GitHub, Jira, Cursor (AI-assisted development)
